

SOIL SOAKER

Active Ingredient: Wetting Agents

Available In: 25L
5L (4 x 5L per carton).

Soil Soaker is a long term soil wetting agent that penetrates the soil to give fertilisers and water a more even wetting.

DIRECTIONS FOR USE

Turf-Grass Applications: It is recommended **SOIL SOAKER** be used in conjunction with **ULTRAGREEN** as it will enhance greatly the effect and even penetration of the fertilizer into the soil. **SOIL SOAKER** can safely be added to water containing the fertilizer.

Home Lawns, Golf Greens Tees, Lawn Courts Bowling Greens: Apply 500ml Soil Soaker to 100m² early in the season. **Soil Soaker** should be diluted with 60 parts of water. Water in thoroughly. For severe soil conditions apply an extra 250ml **Soil Soaker** per 100m² 3 weeks later. Test for water infiltration, softness drainage etc.

Fairways, Athletic Fields, Parks Greens: Apply 25-50 Litres Soil Soaker per hectare per year ideally at the start of the season.

Greenhouses, Nursery, Landscaping, Hanging Baskets, Pot Plants: Most prepared soil mixes contain peat, sawdust and sandy soil. This mixture becomes impervious to water once allowed to dry out. **Soil Soaker** used at 20ml per 10L of water will overcome this problem. Drench soil with the made up solution repeating every 10 to 12 weeks if required.

Market Gardening: Apply 50 litres per hectare.

Trees and Shrubs: Drench soil with a soil prepared from 20ml Soil Soaker to 10 Litres of water, preferably before planting.

First Aid

If **swallowed** give water or milk to drink and induce vomiting using Ipecac Syrup (APF). If in **eyes** flush with water for 15 minutes and seek medical advice. If on **Skin** wash with plenty of soap and water. Remove contaminated clothing and wash before re-use. If irritation occurs seek medical advice. For further information refer to MSDS 25.
