

# TRU BLUE

**Available In:** 25L,  
5L (4 x 5L per carton).  
1L (10 x 1L per carton)

Tru Blue is a reliable spray indicator, which shows where turf protection products have been sprayed. This avoids unnecessary overlaps. It is also useful to show up any faulty nozzles, which may be clogged and can be used as a temporary marker.

## ***DIRECTIONS FOR USE***

For boom application to parks, ovals and fairways, use 600-1000 mL per hectare. For taller and denser grass (roughs, banks, etc.) slightly higher than 1 L per hectare may be necessary.

**For greens, use 6-10mL/100m<sup>2</sup>.**

**For hand applicators, back packs, etc use 30mL/5L.**

The above rates may be varied to suit the operators colour preference.

### **General Comments**

**TRU-BLUE** is formulated to readily indicate areas that have been sprayed with pesticides. Readily indicates areas that have been missed, and allows the operator to monitor spray overlapping, machine malfunction and clogged nozzles **TRU-BLUE** gives a temporary colouration that fades with rain and sunlight. Machinery cleans up easily.
