

ULTRAWET

Active Ingredient: Non-ionic organic surfactant.

Available In: 25L
5L (4 x 5 Litres per carton)

Ultrawet is a wetting agent that can be used for spraying with turf protection products to give even coverage on leaves.

DIRECTIONS FOR USE

Ultrawet can be added directly to the spray tank containing the diluted pesticide. DO NOT add to the concentrated pesticide.

Spray foliage to the point where leaves are just wet. Spraying beyond this point will lead to run-off with consequent wastage of spray chemicals.

Horticultural Sprays: Use 12-18mL per 100 Litres of spray (1 teaspoonful per 20L). Use the higher rate for powdery mildew sprays.

Herbicide Sprays: Use 125-250mL per 100 Litres (25-50mL per 20L). Use the higher rate for waxy or hairy hard to wet plants. For DSMA and MSMA use 500mL per 100 litres of spray mixture (100mL per 20L)

Misting Machines: Use 2 teaspoonful per 5 litres of spray for both horticultural and herbicide sprays.
